

FOR IMMEDIATE RELEASE

Disk Hero announces an updated version of its “REMOTE TARGET” application

Dublin, CA, Feb 22, 2008 – Disk Hero has incorporated its new Remote Target capability product as part of its reseller offering for all of its resellers. This allows a reseller to put a remote target application into a client’s location to collect all PC and Server data that is backed up through Disk Hero applications to download a local copy of the data to an internal hard drive. This allows a reseller or reseller’s client to restore data immediately, without having to wait for a large download via the Internet.

The additional copy of all backed up data is stored at the Resellers location if desired, with its own encryption and password protection. This local reseller copy allows restores of even large amounts of lost data to occur as quickly as a reseller can assemble a new computer for a customer.

The data encryption eliminates our customer’s worry about theft of sensitive data. The customer controls one password, and the reseller has a second password. This combination unlocks the encrypted data, providing double protection for customers.

About Disk Hero

Everyone has documents, pictures, music and other important files that would be difficult or impossible to replace. Disk Hero has over 34,000 customers using a complete suite of backup solutions for individuals and small businesses. Visit www.DiskHero.com for additional information and a backup solution of your own.
